Section Details: Casing 6 9/16" Jamb.....	13
Section Details: Mullion.....	14

# Clad Ultimate Casement Venting Picture

## Unit Features

### Ultimate Casement Venting Picture Window - CUCAVP

*NOTE: Clad Ultimate Casement Venting Picture is not available with CE mark.*

#### Hardware:

- The Venting Picture unit utilizes hardware which operates and locks the sash. The sliding mechanisms attached to the frame operate the hinges which project the sash outward, parallel to the frame. The unit is operated using two handles, located on each the side jambs. Venting picture hardware does not allow this unit to be used for egress applications.
- The Venting Picture hardware allows the sash to project outward 2 1/4" (57) to allow for ventilation.
- Handles are operated simultaneously on widths less than 36" (914) and independently on widths greater than 36" (914).
- Standard handle is made of zinc and painted Satin Taupe. Optional finishes: White, Bronze, Brass, Satin Chrome, Antique Brass, Oil Rubbed Bronze, Satin Nickel, and Polished Chrome.
- Optional tall handle location available on units with OM height of 77 1/8" (1959) or greater, places center of handle 36" (914) from bottom of unit.

#### Weather Strip:

- The weather strip on the frame consists of a low-durometer hollow bulb on top of a flexible barbed stem. The material is UV resistant, durable, has a low CTE, and is flexible enough to be bent around 90 degree corners. The bent weather strip allows for no seams in the corners.
- The frame weather strip is beige.
- The sash weather strip is made of a glass filled polypropylene material with a flexible bulb and is formulated to be UV resistant, have a low COE, and slide easily in and out of the frame.
- The sash weather strip is available in white, beige and black.

#### Screening:

- The Venting Picture window screen is fabricated with silver gray fiberglass screen mesh encasing a reticulated foam bulb which is retained by a vinyl carrier and fastened to the sash with adhesive tape. The position of the screen bulb places it in contact with the frame to block insects and large air born particles while still allowing airflow.

NOTE: Clad Ultimate Venting Picture Window Air Volume Formula - Stated Volume is based on 1 MPH wind (88.0 ft. min.). To determine volume for other speeds of wind, convert the wind speed from MPH to feet per minute and use the following equation: Volume in cubic feet per minute = Area Velocity of Wind (ex. CN6464: .70 x 88.0 ft./mn x .852 = 52.54 cubic feet per minute (volume of air). 0.853 represents the resistance of air movement through the venting picture screen system.

NOTE: Clad Ultimate Venting Picture Window Air Volume Formula - Stated Volume is based on 1 MPH wind (88.0 ft. min.). To determine volume for other speeds of wind, convert the wind speed from MPH to feet per minute and use the following equation: Volume in cubic feet per minute = Area Velocity of Wind (ex. CN6464: .70 x 88.0 ft./min x .852 = 52.54 cubic feet per minute (volume of air). 0.853 represents the resistance of air movement through the venting picture screen system.
