NEW CONSTRUCTION

RESIDENTIAL

PRAIRIE BARN

SITUATION OVERVIEW

The goal of this project was to design and build a simple, energy-efficient, barn-style home with historic exterior details and a modern interior. The custom residence is located in the heart of a historic downtown area in Lewes, Delaware. The 2,200 square-foot home was built on a narrow lot that had to be mindful of the local Historical Preservation Committee's guidelines per the city's requirements. The exterior is dressed with board and batten siding and features natural landscaping details to give the home the feel of a prairie-style barn in a town setting. The interior showcases clean lines and an abundance of natural light from Integrity Casement, Awning and Double Hung Windows. The windows are styled with Simulated Divided Lites (SDL) and grille patterns to meet the historical district's building requirements and rated to offer the owner superior energy efficiency.

INTEGRITY SOLUTION

Integrity windows were the ideal solution to meet this project's many requirements that included an Ebony exterior finish with a natural bare wood interior. Sound transmission was also an issue that needed to be considered since the residence is located on a busy street. Integrity windows met or exceeded all the requirements and today this spectacular residence is up for "Best New Home" in this historic district.

Integrity Wood-Ultrex windows and doors are built tougher, last longer and protect better.

- Integrity windows are made with Ultrex, Integrity's pultruded fiberglass that's as strong as steel. Combining the industry's best high-performance finish with superior energy efficiency, Integrity windows outperform vinyl and composite products on nearly every measure.*
- Integrity windows are ENERGY STAR® rated, which can save 7-15% of the total energy bill.**
- Wood Interior Grilles, Simulated Divided Lite (SDL), Simulated Divided Lites with Spacer (SDLS) and Grilles-Between-the-Glass (GBG) options add style choices to windows and doors.

* As a comparison of tensile strength.
