

Nailing Fin/Corner Gasket Installation Instruction

Standard Nailing Fin Application

Figure 1

Optional Clad Casing Application

Figure 2

1. Position the factory applied nailing fin/drip cap upright for installation as shown in figure 1. Ensure drip cap lip hangs over the head jamb extrusion. See figure 2 for units with factory applied casing.
2. **DO NOT APPLY THE NAILING FIN CORNER GASKETS AT THIS TIME.** Install the unit into rough opening following the respective installation instructions.
3. After the unit has been permanently secured, apply nailing fin corner gaskets to each corner of the nailing fin (top corner only on doors) as shown in figure 1. Units with casing will not use corner gaskets.

Units with clad casing require installation of a drip cap along the head jamb.

IMPORTANT

Clad nailing fin is not designed to be a weatherproof flashing. When installing any clad product the unit must be flashed and sealed to provide a proper installation.
